

Hard on germs, Soft on Hands

## Chlorhexidine Gluconate Surgical Hand & Body Wash

### Active Action

- Chlorhexidine Gluconate rapidly kills transient & resident skin flora while emollient maintains skin hydration.
- Kills 99.9% bacteria including MRSA & VRE.
- Effective against HIV, HBV, RSV, HSV virus and fungi.
- Persistent action prevents re-growth of microbes for up to 6 hours.
- Reduces microbial density on environmental surfaces and prevents cross-contamination between healthcare personnel and patients.
- Cumulative effect increases efficacy with repeated applications.
- Surfactant provides additional cleansing action.
- Broad spectrum action within 15 seconds.

### Application

- Use undiluted as anti-microbial surgical hand scrub to prevent re-growth of microbes on hands. Rub 5ml of product on wet hands and forearms thoroughly for 30 seconds. Rinse off and dry.
- Minimize risk of surgical site infections by using undiluted as pre-and-post operative antimicrobial body wash. Apply on to wet body and work up lather. Rinse thoroughly with water and dry.
- Also effective as surgical hand wash & for superficial skin wound cleansing.
